**Abstract:** This article describes the scientific, practical and methodological foundations of modern biotechnological processes. In addition, it was explained that the development of material and spiritual production processes of the development of biotechnological processes in the global information space and its main features are the guarantee of the country's development.

**Keywords:** global information space, biotechnological processes, material and spiritual production, production, development.

### INTRODUCTION

In order to fill the gaps in the psyche, morals and spirituality of a person, philosophically analyzing the process of material and spiritual production in the independent social development of Uzbekistan, referring to the lives, thoughts, wise words, and writings of our ancestors, and considering the solution of the problem on a universal basis, "harmony of materiality and spirituality (The concept of creating a healthy competitive social environment by directing the principle of "pluralistic approach, independent thinking, training of will, raising of thinking, critical assimilation of advanced technologies and culture of the peoples of the world" to the modernization of the educational system was proposed.

### MATERIALS AND METHODS

In Eastern philosophical thinking, studying the secrets of the human psyche in relation to the materiality of a person is considered one of the most urgent and important problems. In particular, Abu Nasr Farabi said, "People create a society according to their characteristics and natural needs. Their actions and actions are initially determined by natural abilities that gradually become habits" [Al-Farabi. 1989: p. 229.]. There are also approaches to this issue in Western philosophy. In it, a new interpretation of the human psyche began in the middle of the 20th century, F. Nietzsche [Nietzsche F. 1990.] founded by. A. Bergson [Bergson A. 1908.], O. Spengler [Spengler O. 1992.], V. Dilthey [Dilthey V. 1978.] who developed it and focused on understanding the essence of human life from the person himself. At the current stage of biotechnological development, it is inevitable that humanity will get rid of new dangers and threats that have not been resolved by having high moral values and realizing its human nature.

### RESULTS AND DISCUSSION

It is impossible to ensure that the independent social development of Uzbekistan continues at an accelerated pace without philosophically researching the material and spiritual production process taking place in the life of the society, without taking into account its results. The implementation of this work theoretically and practically, in turn, allows to harmonize them by fully understanding the dialectics of general, private, and separate material and spiritual production processes in all aspects of society's life.

In this regard, President Shavkat Mirziyoyev said, "...If the body of society is the economy, then its soul and spirit is spirituality, ... - As we decided to build a new Uzbekistan, we rely on two strong pillars. The first is a strong economy based on market principles. The second is a strong spirituality based on the rich heritage of our ancestors and national values" [Xalk suzi. January 20, 2021 No. 13 (7793) // Under the chairmanship of the President of the Republic of Uzbekistan Shavkat Mirziyoev, on January 19, the system of spiritual and educational affairs was fundamentally overhauled from the meeting of video selectors on issues of improvement, strengthening cooperation of state and public organizations in this regard.].

Therefore, biotechnological development in the process of material and spiritual production forms the vital foundations of any society. In this case, material production usually means the provision of services necessary for the creation and production of material products - food, clothing, housing, etc. [O'lmasov A., Vahobov A.V. Economic theory. - T.: "Sharq", 2016.-B.30.].

The development of biotechnological processes in the conditions of globalization, the main characteristics of the development of material production processes in Uzbekistan: That is;

1. effective use of natural resources in all respects on the basis of new modern techniques and technologies;
2. productive use of all advantages of the market economy, organization of production on the basis of initiative and entrepreneurship;
3. economic activity on the basis of multiple ownership and strengthening of property saving activities on the basis of strengthening people's sense of ownership of their property;
4. the status of economic independence is given to each entity that creates material wealth;
5. continuous modernization and diversification of production sectors and industries;
6. it is represented by the involvement of innovations in the main branches of production.

Therefore, the role of biotechnological processes in harmonizing material and spiritual production is determined by:

1. Biotechnological processes are a unique infosphere, which is formed as a result of global changes occurring in society through technical and technological developments in the field of information and communications and develops social phenomena.
2. Through the development of material and spiritual production, biotechnological processes lead to maintaining the balance of relations between systems such as the state and society, individual and entrepreneurship, and bringing their interests to a consensus, that is, to harmonization. This, in turn, ensures a reduction in the flow of disparities between informed states and regions, between the state and social groups.
3. Harmonization of material and spiritual production of biotechnological processes as a factor of ensuring sustainable development of society: firstly, development of normative and legal documents; secondly, development of information and communication networks, classification of service areas, standardization of information devices; thirdly, to study various social and cultural aspects of the information society; fourthly, it plays an important role in promoting and promoting the importance of information space among the population.

## CONCLUSION

These global problems mean, on the one hand, the harmonization of material and spiritual production processes, and on the other hand, that these problems cannot be solved without them, and the main issue is that materiality and spirituality are inseparable, they are like two wings of a bird.
