Abstract: The article policy central to biology teaching methods activities, the development of innovative technologies, the science of teaching methods with itself and a specific pedagogical features, you should read that didactic goals and objectives on the basis of the creative work of the organization of methodical way of lighting given.

Keywords: biologiya educational science content, the teacher of a person as own-self-development, interactive methods and tools of the competition.

In Uzbekistan biology education areas on science is only for the information-methodical supply create the opportunity which gives science portal creation, information resources for biology education in the process of use of technical methods work out, higher education institutions of modern information-communication technologies, tools with equipped, students, teachers and researchers in the world, education resources, modern information resource center, data base access and opportunities to expand the important one of the tasks is.

This is the actual tasks performed to increase biology teaching methods of direction: methodologyodick tayyorgaall rli into my fiancéovchi darajalarni electronic learning environment in conditions of information-kompetensiyaviy approach based on enrich; biology teachercher nest methodologyodick tayyorgarlik oft to takothe mill,ashtirishto focused global education resources, modern information resource center, data base access opportunities of expansion; biology teachercher nest methodologyodick tayyorgarlik oft to takothe mill,ashtirish's konseptual, refleksiv, integratedaministry of foreign affairs komponentlarini own intoan olgan mexan ishlab to a;

biology teacher atasettings methodology ofodick tayyorgainto all rli takothe mill,ashtirishning axborot-kommunikasiya hamdis a innovacon-padagogik tehnolopromised to takea acociylangan study-methodologyodick ta'minothe oldest and largest, mul'time isali electricon ta'education recurclasettings discoveratooth should be.

Pedagogy in the field of professional kompetentlik the content of scientists by a different interpretation is, that we note as it should, various rakursdagi look researchers pedagogical activity in it , or it's the structural part to the emphasis it gives. The analysis on the basis holistic case of teachers professional kompetentlik of the following structural part of the cognitive, professional-technological, informational, communicative, methodical kompetentlik into divide can.

Professional kompetentlik - specialists by professional activity out increase to be necessary that the knowledge, skills and qualifications to be possessed and them practice a high level of support taken by kept.

Also, kompetensiya of expertise, knowledge, constantly enrich and go, new information to learn, important social requirements to realize to get, new information looking for, find, them re - work and their activities are used to know it requires is. O'educational-educational work of the most high results you achieve, the readers knowledge of the activities of management, new see confirmation educational process modeling of the problems to take off cause if you, the teacher in this professional activity is developed.

Biology teachers' professional-pedagogical activity, to prepare modern science-technical progress requirements based on modernization , and advanced foreign experience to known methods kompetensiya of the development , along with education quality and effectiveness increase, readers students to know the activity content to conduct to find based on their intellectual abilities , the potential to have who the young people of educating pedagogical and psychological capabilities it gives. Teachers adapt to future teachers to the profession being in a relationship, creative and professional work associated with the selection of a particular type or sector professional, clear and is expressed in the decision of which is accepted on a conscious basis, if the work performed is directly connected with the students focused. Thus, the teaching profession, specialist teachers creative career develops in the future, the need to be in a relationship to him in relation to responsible and creative approach to the computer and the person's motivation to be directed to nurturing the social values of the mutual integration of the components are regarded as professional and executive processes separate direction.
